Listing of Claims:

Please cancel claims 1, 2, and 5-24 without prejudice to, or disclaimer of, the subject matter recited therein, and add new claims 25-36, as follows:

Claims 1-2.   (Canceled).

3.   (Original) A method for providing absolute scrolling of a document, the method comprising the steps of:

sensing a pointer sliding along a touch-sensitive surface;

determining a location of the pointer while the pointer is sliding; and

scrolling the document to a location in the document that corresponds to the location of the pointer relative to the touch-sensitive surface.

4. (Original) The method of claim 3, wherein the location in the document compared to a beginning point and end point of the document is proportional to the location of the pointer compared to a first end and a second end of the touch-sensitive surface.

Claims 5-24. (Canceled).

25.   (New) A computer-readable medium storing computer-executable instructions for performing the steps recited in claim 3.

26.   (New) A method, comprising steps of:

determining a location of a pointer relative to a touch-sensitive surface; and

moving a document to a location in the document that corresponds to the location

of the pointer.

27.   (New) The method of claim 26, wherein the location in the document compared

to a beginning point and end point of the document is proportional to the location of the pointer

compared to a first end and a second end of the touch-sensitive surface.

28.   (New) The method of claim 26, further including a step of rounding the location

in the document to a nearest text line.

29.   (New) The method of claim 26, further including a step of rounding the location

in the document to a nearest paragraph or page.

30.   (New) The method of claim 26, wherein the touch-sensitive surface is a single

continuous touch-sensitive surface.

31.   (New) The method of claim 26, wherein the touch-sensitive surface is further a

proximity-sensitive surface.

32.   (New)   A computer-readable medium storing computer-executable instructions for performing the steps recited in claim 26.

33.   (New) A method, comprising steps of:

defining a one-to-one correspondence between locations on a touch-sensitive surface and locations in a document;

determining a first location of a pointer relative to the touch-sensitive surface; and

moving a document to a first location in the document that corresponds to the first location of the pointer.

34.   (New) The method of claim 33, further including steps of:

determining a second location of a pointer relative to the touch-sensitive surface; and

moving the document to a second location in the document that corresponds to the second location of the pointer.

35.   (New) The method of claim 34, wherein the touch-sensitive surface is a single continuous touch-sensitive surface.

36.   (New) A computer-readable medium storing computer-executable instructions for performing the steps recited in claim 33.
